

SecureSkin

Web Vulnerability Blocking

SecureSkin quickly and easily blocks web application and website vulnerabilities.

Cyber security is high on everyone's agenda. Penetration testing is great for identifying vulnerabilities in your websites, applications and online services, but what do you do then?

SecureSkin makes the blocking of vulnerabilities even easier than the testing. It sits within your web infrastructure and filters all web requests and responses, blocking vulnerabilities and logging attacks.

It is quick to implement, is configurable, works for all web technologies and provides a universal solution that is completely under your control.

-  Make your online presence secure with minimal time and effort
-  Configurable – under your control
-  No changes to sites/applications
-  Independence from application vendors/developers
-  React to new threats quickly

SecureSkin

-  Block attacks before they get to your web sites/applications
-  Logs attacks
-  Hides vulnerabilities
-  Provides a single solution for all your web presence
-  Uses a standard filter library to block common vulnerabilities
-  Custom rules and other configuration
